Market Commentary: September 2021

Have you noticed that we tend to forget many things and move on? This weekend is the 20th anniversary of the 9/11 terrorist attacks. As hard as it is, we must pause and remember, for memories are the foundation of culture and identity. We need memorials and reminders like this because it is far too easy for us to forget.

Undoubtedly, we can become lost in the concerns of the day. And there are many: hurricanes, fires, the tragedy of Afghanistan, the devastating effects of the pandemic. Any one of these present-day worries can be consuming, and taken together, overwhelming, preventing us from reflecting. Just as easily, we can also be preoccupied with the latest success, like the skyrocketing stock market, to hinder us from slowing down and remembering the past to help put current events in perspective. Speaking of the high-flying stock market, let us review the figures for the quarter below (also found on page 2 of the Quarterly Market Review).

The Summer Olympics in Japan may have been muted by the pandemic, but stock markets around the world have continued to achieve gold medals. New world records were made by the U.S. S&P 500 Index, Europe's Stoxx 600 Index, and Australia's ASX 200 Index. Back in March, the one-year return for the S&P 500 Index was an astonishing 56%, the best in the last 30 years. It has continued to hit new highs every month since. Bonds on the other hand, and as expected, looked sleepy while they continued to stabilize your portfolio, protect your short-term income needs, and stand poised to buy stocks at a discount - which will eventually occur.

In the financial world, at least four things seem primed to increase in the short term: taxes, cryptocurrency, interest in investments focused on ESG (Environment, Social and Governance), and globalization as a result of the pandemic. *[Watch for a piece from us in the coming months on crypto and blockchain. We are studying these assets/concepts for possible future investments as they grow in use and have the potential to transform finance and technology. For now, as professional fiduciaries, we will steer clear of recommending them because they are unregulated, primarily speculative, and a magnet for an IRS audit.]* The

Grove Street Fiduciary, LLC
Wealth and Trust Advisors

www.GroveStreetFiduciary.com 800.258.9939

thriving stock market may begin to slow or even slide quickly as global supply chain disruptions persist and inflation increases. U.S. unemployment stands at the low rate of 5.2%, wages are up 4.3%, meanwhile, most sectors are struggling to find workers. Also of note, retail investing has doubled to 20% of all stock trading since the pandemic began. These are some of the signs and symptoms that indicate domestic stock markets are likely to have even more volatility than we have seen recently. We expect the same for international and emerging markets.

Back to the subject of remembering, what does this have to do with your investments? Markets destroy investors who forget how they work and stray from the best practices of diversification, buying low-cost investments, protecting short-term cash flow, and of course, buying low and selling high. Many know these foundational precepts to investment success, but in practice do not follow them. This market commentary is a reminder of what you have built and how you will maintain financial security despite the risks. As your fiduciaries, we will not forget the tenets of investment success, regardless of the present conditions and distractions.

Practicing reflection also increases our understanding of the present and shapes our future. Consequently, even at these market highs, we have positioned your portfolio for the security and flexibility it must have. Your investment portfolio is not some cookie-cutter allocation built from a 10-question quiz to establish a (false) risk tolerance and a portfolio that does not match your needs. By focusing on the hard numbers of your personal cash flow, our approach is like that of any business or endowment – methodical and professional.

We have greatly enjoyed seeing those of you who have been able to come to the office for meetings! The phone calls and virtual meetings are most helpful and may be necessary for all of us again if the Delta variant risk increases.

As we spend time reflecting this weekend, we remember the responsibility you have entrusted to us – and how very thankful we are for you.

“Always remember... You are braver than you believe, stronger than you seem and smarter than you think.”— Christopher Robin to Winnie the Pooh

Best regards,

Carl Amos Johnson, MBA, CFP®, AIF®

Inflation: An Exchange Between Eugene Fama and David Booth

Second Quarter 2021

David Booth, Executive Chairman and Founder

Eugene Fama, PhD, Nobel laureate, Director, and Consultant

With the economy starting to recover from the COVID-19 pandemic and investor concerns turning increasingly toward inflation, Dimensional Founder David Booth talked with Nobel laureate Eugene Fama about inflation and how investors should think about it in their portfolios. Excerpts from their conversation have been edited for clarity.

ON PREDICTING INFLATION

David Booth: Gene, you are a founding Director of Dimensional and have been involved in our research and corporate governance for more than 40 years. People may not know that you've also done a lot of research on inflation and interest rates.

We always tell people, "We don't try to forecast. We try to be prepared for various outcomes." Inflation is one of those things you want to be prepared for. There's a pickup in inflation risk that wasn't there, say, 10 years ago. Does that cause you to worry?

Eugene Fama: Historically what's happened is, when there's a spike, the spike persists for a long time. Inflation tends to be highly persistent once you get it. Once it goes down, it tends to be highly persistent on the downside. You've got to be prepared for that. Predicting next month's inflation may not be very hard because this month's inflation can be a pretty good predictor of next month's inflation, or next quarter's inflation, or even the next six months' inflation. Persistence is a characteristic of inflation.

We haven't been in a period of high inflation, or even moderate inflation, for at least 10 years, so I'm not particularly concerned that inflation will be high soon.

ON HOW INVESTORS SHOULD THINK ABOUT INFLATION AND THEIR FINANCIAL GOALS

Booth: Conditions change, so is there anything about the current environment and the risk of inflation heating up that would cause you to change your portfolio?

Fama: I don't think anybody predicts the market very well. Market timing is risky in the sense that you've always emphasized: You may be out of the stock market at precisely the time when it generates its biggest returns. The nature of the stock market is you get a lot of the return in very short periods of time. So, you basically don't want to be out for short periods of time, where you may actually be missing a good part of the return.

I think you take a long-term perspective. You decide how much risk you're willing to take, and then you choose a mix of bonds, stocks, Treasury Inflation-Protected Securities, and whatever else satisfies your long-term goals. And you forget about the short term. Maybe you rebalance occasionally because the weights can get out of whack, but you don't try to time the market in any way, shape, or form. It's a losing proposition.

Booth: As you get to the point in life where you actually need to use your portfolio, does that change the kinds of allocations you'd want?

Fama: The classic answer to that was, yes, you'd shift more toward short-term hedges, short-term bonds. Once you had enough accumulated wealth that you thought you could make it through retirement, you'd want to hedge away any uncertainty that might disturb that. That's a matter of taste and your willingness to take risk and your plans for the people you will leave behind, like your

Inflation: An Exchange Between Eugene Fama and David Booth

(continued from page 14)

charities or your kids. All of that will influence how you make that decision. But the typical person who thinks they'll spend all their money before they die probably wants to move into less risky stuff as they approach retirement.

Booth: The notion of risk is pretty fuzzy. For example, if I decide that I want to hold Treasury bills or CDs when I retire, and you did that 40 years ago, when we started the firm, and you've got that 15% coupon, that's pretty exciting. With \$1 million at 15%, you're getting \$150,000 a year. Today you might get less than 1%.

Fama: Right, but I remember when inflation was running at about 15%, so not much better off!

Booth: Those are different kinds of risks.

Fama: When you approach retirement, you're basically concerned about what your real wealth will look like over the period of your retirement, and you have some incentives to hedge against that. You face the possibility, for example, that if you invest in stocks, you have a higher expected return, but you may lose 30% in a year and that might be devastating for your long-term consumption.

Booth: I think part of planning is not only your investment portfolio, but what to do if you experience unexpected events of any kind. We're kind of back to where we start our usual conversation: "Control what you can control." You can't control markets. What you can do is prepare yourself for what you'll do in case bad events happen. Inflation is just one of many risk factors long-term investors need to be prepared for.
